## **Specification for Third Party Club Lists**

**Version 1.0 US, 2 June 2008**

### **1. Introduction**

The Club List Gateway provided by Promptxt allows third parties to capture data from users who opt-in to club lists. The Promptxt server will handle the initial inbound text from the user according to the account settings, and then send a request to a third party server using the https protocol.

## 2. Receiving a Club List request

The third party must provide a url to a script to which the Promptxt server can send variables via GET, preferably over https. The script should provide a response of 1 for success and 0 for failure. The script must respond within 20 seconds otherwise a response of '0' is assumed. Auto-responses are only sent for '1' response codes.

### 2.1 Sent variables

The following variables are sent to the third party url:

keyword	Club list keyword
mobile	Mobile number of subscriber. E.g. 6463211164
type	The type of request. Type 1 is opt-in. Type 2 is opt-out.
param	Additional parameter sent from the user. Typically the word that follows the keyword. E.g. WINACAR b Here the user has sent answer b to the WINACAR list. The 'b' part is sent as the parameter.

### 2.2 Procedure

The procedure for sending requests is best demonstrated with some simple examples.

An opt-in request is sent using the following query string:

<http://www.yourdomain.com/texts/capture.php?keyword=WINACAR&mobile=6463211164&type=1>

An opt-out request is sent using the following query string:

<http://www.yourdomain.com/texts/capture.php?keyword=WINACAR&mobile=6463211164&type=2>

An opt-in request with parameter is sent using the following query string:

<http://www.yourdomain.com/texts/capture.php?keyword=WINACAR&mobile=6463211164&type=1&param=b>

### 2.3 Server responses

The third party system will return one of these codes following a GET operation.

1	Request successfully received
0	Request failed
